“The Power of Near Miss Reporting: A True Story”

Summary of Presentation:

“The Power of Near Miss Reporting: A True Story” will walk you through an actual Near Miss Incident that occurred on an IDEA Drilling project in May of 2013; from the moment the incident occurred, through the investigation process, and ending with the preventative measures that were established. Along with the positive outcome this near miss had on IDEA Drilling as a company; the take away from this presentation is to never discount any incident report before you take the time to investigate each one - because once investigated, you may be preventing incidents and injuries in both your own and many other organizations.

Max Motley, CSP, STSC:

Max Motley is the Health, Safety, and Environmental Manager for IDEA Drilling LLC; a diamond core, geo-technical, and engineering drilling company who primarily services mining and mineral exploration companies both in the lower 48 states, as well as in Alaska and Hawaii. Max’s approach to safety is “hands on” and “at the field level’ where he enjoys spending as much time as possible with drillers and drill helpers in the field.

Max holds a Master’s degree from the University of Minnesota Duluth in Environmental, Health, and Safety (EHS). Max is both a Certified Safety Professional (CSP) and a Safety Trained Supervisor in Construction (STSC).
